### Rubber Stone Maintenance information:

Our Rubber Stone is very low maintenance, but there is a couple things you should be looking at to keep it beautiful and make it last:

- ❖ Power wash minimum once a year, but twice is better!
- ❖ If you have any spots that pool on your rubber it's a good idea to vacuum excess water to keep mineral staining away. Just like concrete or anything else if you have minerals in your water it can leave white marks.
- ❖ Indoors sweep, vacuum, mop as necessary. Once or twice a year a carpet cleaner can be used to get a good deep clean. Carpet cleaners work outdoors too!
- ❖ Re-coats are few and far between, but if you've had the rubber down for 5 years it may be time. Check in the spring and if it looks dry and the shine is gone it may be time for a touch up.

\*\*\* Cleaning tip for fall, leaf blowers work great to get rid of debris!

\*\*\* Don't have time to power wash? Give us a call, we'll help!
